- Colitis
- Excessive hair loss
- Psoriasis
- Endometriosis
- Stuttering
- Numbness and tingling
- Sinusitis

Our bodies are 70% water, and blood is 90% water. Healthy blood pH is 7.35 – 7.45. Crabs die when the water reaches a pH of 6; fish die at a pH of 3. The “soft drinks” we love are at a pH of 2.5!!! Doesn't it make sense to drink alkaline water???
